

Instructions for Submitting the Homework

- For each question, submit the C code and samples of the output (see below)
- Provide multiple output samples that test the code for various cases of input (see below)
- The C code should be copy/pasted as text (not as a figure)
- The sample output should be copy/pasted as a figure
- Provide a readable code: use variable names that are easy to understand, indent your code, put comments in your code
- Put all the codes and sample outputs in one file and **submit a single PDF file**

Read below (file has 6 pages)

Sample Homework

EGN 3211, Fall 2014

Name: John Doe

Question 1

```
int main(){
    int a, b;

    printf("Enter an integer: ");
    scanf("%d", &a);

    printf("Enter an integer: ");
    scanf("%d", &b);

    printf("\n");

    // Case where a is larger
    if(a > b)
        printf("Large value is %d, small value is %d\n", a, b);

    // Case where b is larger
    else if(a < b)
        printf("Large value is %d, small value is %d\n", b, a);

    // Case where a and b are equal
    else printf("The two values are equal to %d\n", a);

    printf("\n");

    system("PAUSE");
    return 0;
}
```

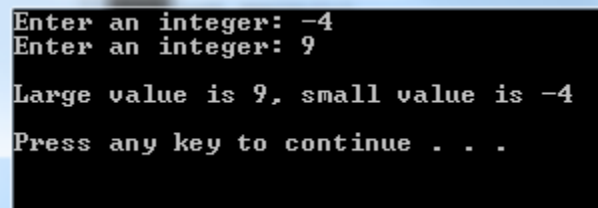

Enter an integer: 12
Enter an integer: 4
Large value is 12, small value is 4
Press any key to continue . . .

Enter an integer: 3
Enter an integer: 9
Large value is 9, small value is 3
Press any key to continue . . .

Enter an integer: 3
Enter an integer: 3
The two values are equal to 3
Press any key to continue . . .

Enter an integer: -4
Enter an integer: 9
Large value is 9, small value is -4
Press any key to continue . . .

Remember to indent your code as shown below.

Good style:

```
// Case where we count up
if(a==0) {
    x=1;

    while(x<=100) {
        printf("%d ", x);
        x = x+1;
    }
}

// Case where we count down
else if(a==1) {
    x=100;

    while(x>=1) {
        printf("%d ", x);
        x = x-1;
    }
}
```

This code is indented and
is easy to read.

Bad style:

```
if(a==0) {
x=1;
while(x<=100) {
printf("%d ", x);
x = x+1;
}
}
else if(a==1) {
x=100;
while(x>=1) {
printf("%d ", x);
x = x-1;
}
}
```

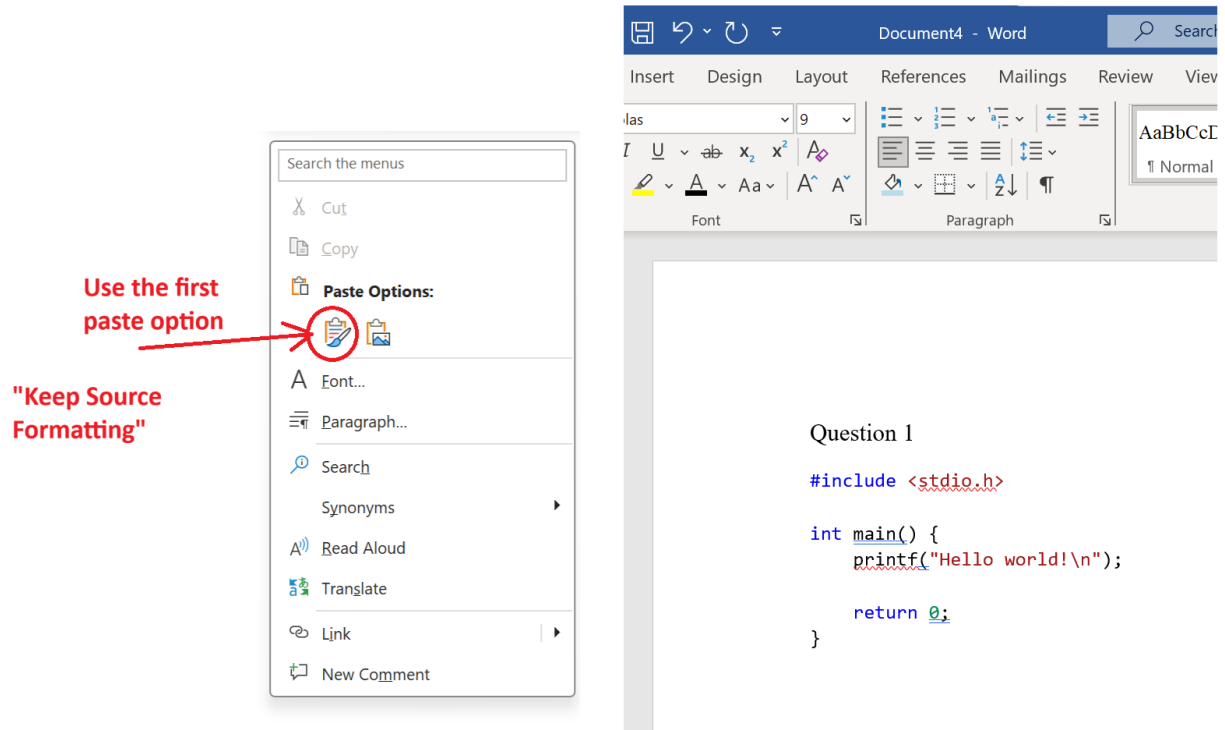

This code is hard to read.
It's not indented.

How to copy/paste your code in an editor

The goal here is that the code is easy to read.

Option 1

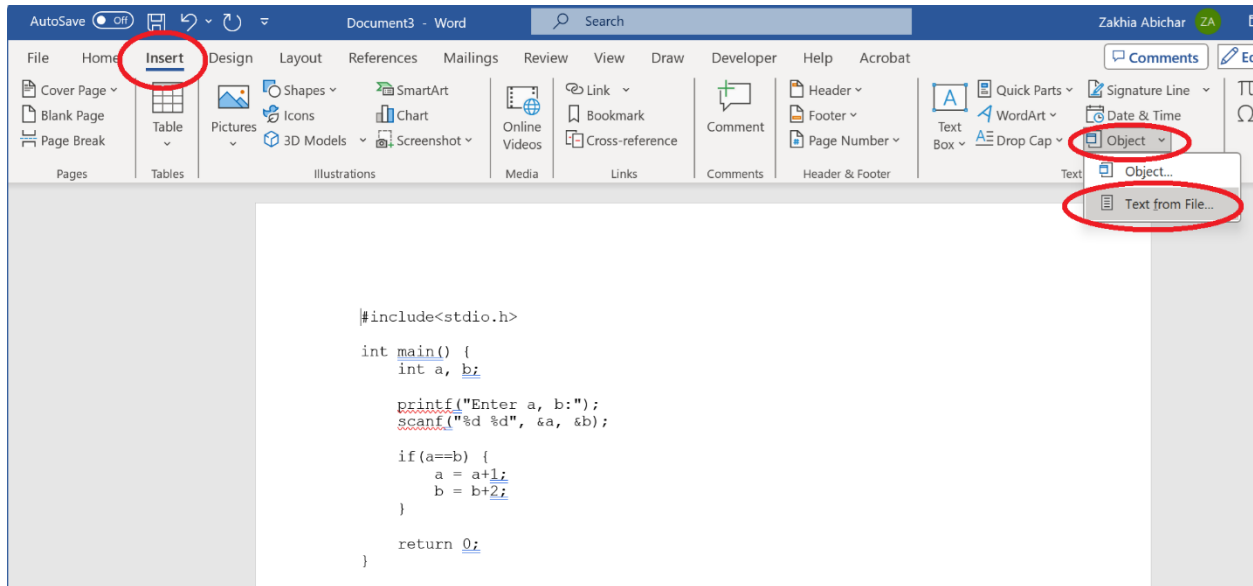

Paste the code in MS Word using the “Keep Source Formatting” option.

(Next option is below)

Option 2

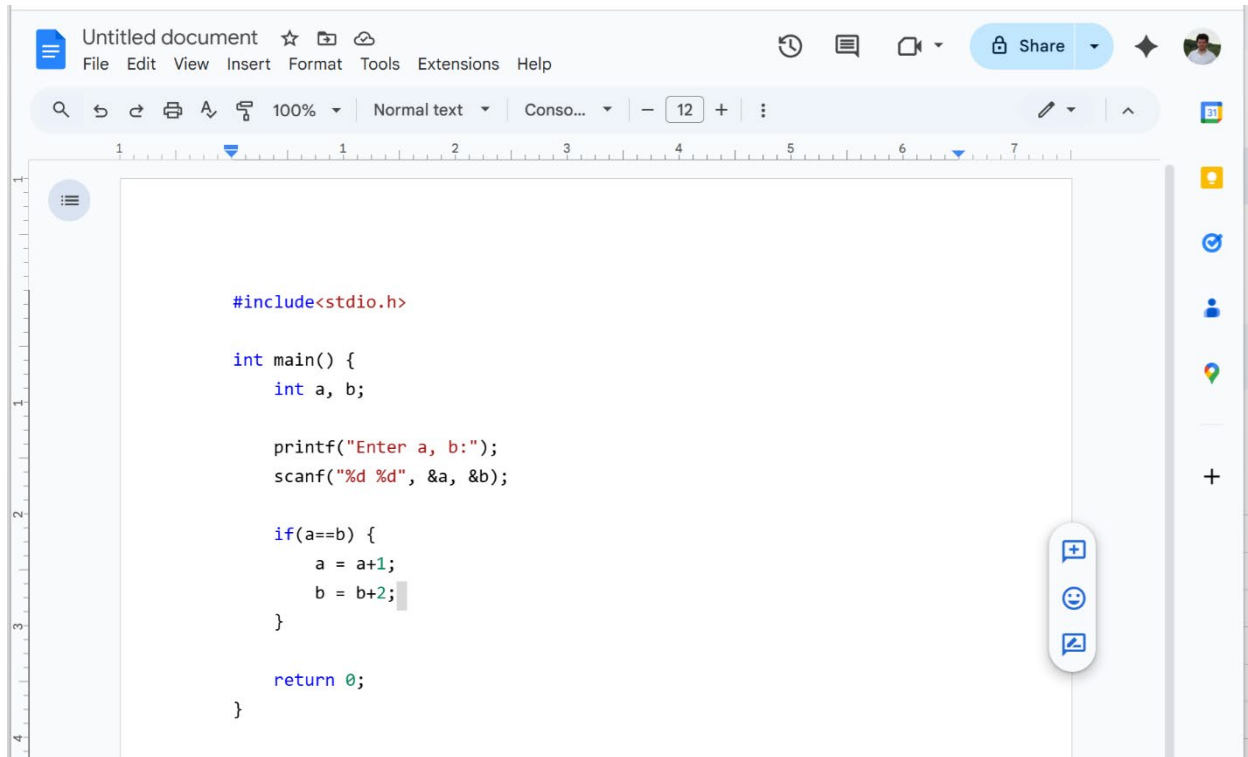

Some versions of MS Word don't have the "Keep Source Formatting" option. Click on "Insert" then "Object" then "Text from File" as shown below. This approach preserves the code's formatting.

(Next option is below)

Option 3

Use Google Docs. Pasting a code in a Google doc preserves its format as shown below. Google Docs is available to anyone with a Google account. Go this address (<http://drive.google.com>) and create a Google doc.

The screenshot shows a Google Docs interface with a document titled "Untitled document". The menu bar includes File, Edit, View, Insert, Format, Tools, Extensions, and Help. The toolbar shows search, undo, redo, print, text color, background color, font size (12), and other options. The document content is a C program snippet with syntax highlighting:

```
#include<stdio.h>

int main() {
    int a, b;

    printf("Enter a, b:");
    scanf("%d %d", &a, &b);

    if(a==b) {
        a = a+1;
        b = b+2;
    }

    return 0;
}
```
